

# Services

## Logo Design

We design modern logos and branding schemes for small businesses, churches, and other organizations.

Our logos are completely customizable to the vision of the customer.

All files are created in vector format to ensure the highest quality and best compatibility.

Logos come with a new or standardized color scheme and a branding standard guide.

Our team can also design literature and branded graphics that will perfectly represent the brand of the customer.

## Livestream Systems

Our team designs custom professional livestreaming and video production systems to meet any of the needs of the customer.

We design each system to best fit the location and use.

Each system is self-contained and the equipment specifications vary depending on which livestream package is requested.

Every livestream system can produce professional audio/visual content with varying levels of customizability.

Our team will travel to the installation location, design the system, order and stage equipment, install the system, and conduct a training session on the operation and troubleshooting of the equipment.

## Website Development

Digital Renovation creates beautiful, professional, and responsive websites for our customers.

Responsive design elements are baked into each website to ensure the best viewing experience for any screen.

Each site is completely customizable and will come with a new or transferred domain name.

We develop each website from scratch using languages such as HTML, CSS, and JavaScript.

Our team will create mockups of the design prior to development in order to capture the vision of the customer.
